

Executive Summary: Status Report for scottyab/rootbeer

Date: January 30, 2025

Prepared By: Stella Heo

Analysis: [Link to fork repository](#)

The scottyab/rootbeer repository is a critical project for our company, focusing on root checking on Android libraries and sample apps. This analysis examines the activities of authors, commit history, and project contributions over time. The repository currently has 44 contributors, with source files written in different languages such as Java, Javascript, Kotlin, C, C#, Ruby, Go, PHP, HTML, CSS, JSON, XML, LOG, TXT being considered for this analysis. These source file extensions were selected as they represent the core and non-executable files were excluded.

Findings

- **Top Contributors:** **Scott Alexander-Bown** appears to be the most active author with frequent commits across many different files. **Matthew Rollings** and **Daniel Kutik** have been active in recent weeks. Artsem Kurantsou and Frieder Bluemle have also made contributions with less frequent activities.
- **Development Trends:** Several files appear to be highly active in recent weeks, showing ongoing development or bug fixes on the repository. On the other hand, some files have been actively touched from the early days to the present.
